## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the synthetic stabilizing member follows a loop as in claims 12 and 16 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Specification***

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the claims recite stabilizing strips; however, the specification discloses bands.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3, 5, 7-9, 11, 14, and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Barrett et al #5,456,554. Barrett et al discloses a retaining wall system comprising a facing 32; stabilizing strips 134 disconnected from the facing; and secondary members 44 connected to the facing.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 4, 10, 12, 16, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barrett et al in view of Brown et al #4,824,293. Barrett et al discloses the claimed invention except for the secondary elements cast into the panel.

Art Unit: 3673

Brown et al teaches that it is known to cast a flexible synthetic reinforcing member 12 into a panel 11 as set forth at column 2, lines 45-58. It would have been obvious to one having ordinary skill in the art at the time the invention was made to cast a flexible synthetic reinforcing member into a panel, as taught by Brown et al in order to facilitate stabilization of a retaining wall structure.

7. Claims 13 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barrett et al in view of Orsat #2001/0014255. Barrett et al discloses the claimed invention except for zigzag path. Orsat teaches that it is known to provide strips in a zigzag path as shown in figure 1. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide strips in a zigzag path, as taught by Orsat in order to facilitate stabilization of a retaining wall structure.

### ***Response to Arguments***

8. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
